- Volume = $10 \times 5 \times 0.15 = 7.5$ cubic meters

Question 2: Estimate the quantity of bricks needed for constructing a wall measuring 4m long, 3m high, and 0.23m thick, assuming standard brick size and mortar joints.

Approach:

- Calculate the wall volume
- Deduct voids or use standard brick calculation methods
- Determine number of bricks based on unit volume per brick

Question 3: Prepare a bar bending schedule for a simply supported beam of span 6m, width 0.3m, and effective depth 0.5m.

Approach:

- Interpret the structural drawing
- List required reinforcement bars
- Specify bending details as per IS standards
