- L2 Frequency (1227.60 MHz): Used for military signals and for dual-frequency civilian applications like ionospheric correction.

The signals include information such as satellite position, clock corrections, and ephemeris data, which receivers use to compute accurate positioning.

Basic Principles of Trilateration

GPS surveying relies on measuring distances between the receiver and multiple satellites:

- Pseudo-range measurements: Calculated based on the time delay of received signals.
- Multilateration: Using at least four satellites to solve for three-dimensional position (latitude, longitude, altitude) and receiver clock bias.

Technological Components and Equipment

GPS Receivers

Modern GPS receivers come in various configurations:

- Single-frequency receivers: Suitable for general surveying with moderate accuracy.
- Dual-frequency receivers: Offer enhanced precision by correcting ionospheric delays.
- Real-Time Kinematic (RTK) receivers: Provide centimeter-level accuracy in real-time, essential for precision surveying.
- Network RTK and Continuously Operating Reference Stations (CORS): Support network-based

solutions that improve accuracy over larger areas.

Antennas and Data Loggers

- Survey-grade antennas: Designed to minimize multipath effects and enhance signal quality.
- Data loggers: Devices that record raw satellite data for post-processing or real-time correction.

Software and Data Processing Tools

- Survey data processing software: For post-survey adjustments, error analysis, and quality assurance.
- Real-time correction services: Such as Virtual Reference Stations (VRS) and network corrections.

Surveying Methodologies and Techniques

Static GPS Surveying

Ideal for high-precision applications where data collection involves:

- Long occupation times (typically 30 minutes to several hours).
- Post-processing of data to achieve centimeter-level accuracy.
- Applications: geodetic control, boundary determination.

Fast Static and Rapid Static Surveying

- Fast Static: Shorter occupation times, suitable for rapid deployment.
- Rapid Static: Even shorter sessions, offering a balance between speed and accuracy.

RTK and Real-Time Kinematic Surveying
