Question What is the purpose of using a microscope in biology practicals at MSCE level? **Answer** A microscope is used to observe small specimens and details that are not visible to the naked eye, allowing students to study cell structures, microorganisms, and tissues in detail. How do you prepare a wet mount slide for observing microorganisms? To prepare a wet mount, place a drop of water or stain on the slide, add the specimen, and then carefully place a cover slip on top to avoid air bubbles. This allows the specimen to be viewed under a microscope. What is the significance of staining in biological microscopy? Staining enhances the contrast of specimens, making specific structures or cells more visible under the microscope, which aids in detailed observation and identification. Describe the procedure to test for the presence of starch in a leaf. Boil the leaf in

water to kill it, then boil it in ethanol to remove chlorophyll. Rinse the leaf, then add iodine solution. A color change to blue-black indicates the presence of starch. Why is it important to handle biological specimens carefully during practicals? Careful handling prevents damage to the specimens, ensures accurate results, and promotes safety during laboratory activities.
