Typical Question Types in the June 2013 OCR Biology Paper

Understanding the types of questions can help students develop effective answering strategies.

Multiple-Choice Questions

These assess basic understanding and are often related to experimental procedures or data interpretation.

Data Analysis and Interpretation

Students may be provided with tables, graphs, or raw data to analyze, requiring calculations or explanations.

Short and Extended Answer Questions

- Short questions might ask for definitions or brief explanations.
- Extended questions often involve designing experiments, evaluating methods, or discussing biological implications.

Practical Scenario-Based Questions

Students are presented with a practical situation, such as investigating enzyme activity, and asked to suggest procedures, interpret results, or identify errors.

Sample Questions and Model Answers from June 2013 Paper

While the actual exam questions are proprietary, typical examples include:

Example 1: Investigating Enzyme Activity

Question:

Describe an experimental method to investigate the effect of temperature on enzyme activity. Include the controls you would use.

Model Answer:

To investigate the effect of temperature on enzyme activity, prepare a series of test tubes containing a fixed concentration of substrate and enzyme. Incubate each tube at different temperatures (e.g., 0°C, 20°C, 40°C, 60°C). Measure the amount of product formed over a fixed period using an appropriate method, such as spectrophotometry. Controls should include a test tube kept at a temperature where enzyme activity is known to be optimal and a blank with no enzyme to account for non-enzymatic reactions. Ensure all other conditions, such as pH and substrate concentration, are kept constant.

Example 2: Data Interpretation

Question:

Given a graph showing enzyme activity at various pH levels, identify the optimum pH and explain

how enzyme activity changes outside this optimum.

Model Answer:

The enzyme activity peaks at pH 7.0, indicating this is the optimum pH. Outside this pH, enzyme activity decreases due to denaturation or changes in the ionic bonds within the enzyme's active site, leading to less efficient substrate binding. Acidic or alkaline conditions can alter the enzyme's shape, reducing its catalytic efficiency.
