## Introduction to Investment and Portfolio Management

Understanding the basics of investment and portfolio management sets the foundation for building wealth and achieving financial goals. The Bodie 9e emphasizes a disciplined approach rooted in financial theory and empirical evidence.

### What Is Investment?

Investment involves allocating resources, usually money, in a manner that is expected to generate future income or capital appreciation. It contrasts with consumption, which involves using resources for immediate satisfaction.

### Why Portfolio Management Matters

Portfolio management is the art and science of selecting and overseeing a group of investments that align with an investor's objectives, risk tolerance, and time horizon. Effective management aims to maximize returns while controlling risk.

## Fundamental Concepts in Investment Theory

The Bodie 9e presents essential theories and models that underpin modern investment strategies.

### Time Value of Money (TVM)

A core principle stating that a dollar today is worth more than a dollar in the future due to its potential earning capacity.

- Present value (PV): The current worth of future cash flows.
- Future value (FV): The value of current investments at a future date.
- Discount rate: The rate used to determine PV from FV.

## Risk and Return

Investors expect higher returns for taking on greater risks. The Bodie 9e discusses the risk-return tradeoff and how it influences investment choices.

- Expected return: The anticipated average return on an investment.
- Risk: The variability of returns, often measured by standard deviation or variance.

## Efficient Market Hypothesis (EMH)

The theory that asset prices fully reflect all available information, implying that outperforming the market consistently is challenging.

## Types of Investments

The textbook categorizes investments into various asset classes, each with unique characteristics.

### Equities (Stocks)

Ownership shares in a corporation, offering potential for capital appreciation and dividends.

### Fixed-Income Securities (Bonds)

Debt instruments that pay regular interest and return principal at maturity.

### Derivatives

Financial contracts like options and futures that derive value from underlying assets, used for hedging or speculation.

### Real Assets

Physical assets such as real estate, commodities, and infrastructure.

## Portfolio Theory and Construction

Building an optimal portfolio involves balancing risk and return through diversification and strategic asset allocation.

## Modern Portfolio Theory (MPT)

Developed by Harry Markowitz, MPT provides a quantitative framework for portfolio selection, emphasizing diversification to reduce risk.

- Expected Portfolio Return: Weighted average of individual asset returns.
- Portfolio Variance: A function of individual variances and covariances between assets.
- Efficient Frontier: The set of portfolios offering the highest expected return for a given level of risk.

## Asset Allocation Strategies

Deciding how to distribute investments across asset classes.

- Strategic Asset Allocation: Long-term allocation based on investor goals.
- Tactical Asset Allocation: Short-term adjustments to capitalize on market opportunities.
- Dynamic Asset Allocation: Rebalancing based on changing market conditions.

## Risk Measurement Tools

The Bodie 9e discusses various metrics:

- Standard Deviation: Measures total volatility.
- Beta: Assesses systematic risk relative to the market.
- Value at Risk (VaR): Estimates potential loss over a specified period.

## Hedging Strategies

Using derivatives to offset potential losses:

- Options: Contracts granting the right to buy/sell assets at predetermined prices.
- Futures: Agreements to buy or sell assets at future dates at agreed prices.
- Swaps: Exchange of cash flows or assets to manage exposure.

## Behavioral Finance Insights

The Bodie 9e explores how psychological factors influence investment decisions, often leading to deviations from rational behavior.

### Common Behavioral Biases

- Overconfidence: Overestimating one's knowledge or ability.
- Herding: Following the actions of others, often leading to bubbles.
