Sample Model Answers Inspired by the 2013 Paper

Example 1: Formation of a Volcanic Mountain

A volcanic mountain forms through the process of volcanic eruptions. When magma from beneath the Earth's crust rises to the surface, it cools and solidifies, building up layers over time. Continuous eruptions lead to the formation of a conical mountain called a volcano. These mountains are characterized by features like craters and lava flows. The environmental impacts include destruction of habitats, ash fall affecting air quality, and potential for secondary hazards such as mudflows and pyroclastic flows. Volcanic mountains are significant for their mineral resources and geothermal energy potential.

Example 2: Causes of Urbanization in Developing Countries

Urbanization in developing nations is primarily driven by rural-urban migration, where people seek better employment, education, and healthcare facilities. Industrial growth and infrastructure development attract workers to cities. Additionally, natural population increase contributes to urban growth. However, rapid urbanization often results in challenges such as overcrowding, inadequate housing, traffic congestion, and pollution. These issues necessitate strategic urban planning and sustainable development policies to ensure balanced growth.
